PROJECTS

- **Student analytics and Management system.**

This project is built on android platform. This application helps students, professors and parents to be in sync with academic work and also does performance analysis using data mining algorithms and mysql and gives insights.

Technologies used:

Android studio, PHP, mysql, json.

- **Short Stories**

A beautiful responsive website to display short stories

This is a web site powered by NodeJS, AngularJs and Bootstrap

I made MongoDB variant as well

- **Bookzone**

This is done using jquery mobile framework which will work on both android and ios

This application will help senior students to sell their old books to juniors.

- **Income tax calculator**

This is a native android application which will have user interface to input employee salary and deduction details and calculates final tax payable.

- **Simple math practice desktop application**

This is a simple desktop application made with windows forms C# to help kids practice maths

- **Sentence Builder**

Sentence builder is a native android application which helps students to learn correct usage of english words using simple to understand english sentences. It is useful for many exams like IELTS,GRE,GMAT etc.

- **Dinos**

Dinos is a simple 2D game powered by godot engine.

- **Attendance Assist.**

This is a simple desktop application made with windows forms ,C#

This application is currently being used by some of my professors to take class attendance.

- **My Git profile**

<https://github.com/sudheersuri>
